

PHISHING EMAIL DETECTION & AWARENESS SYSTEM

EMAIL ANALYSIS REPORT

Future Interns Cyber Security Internship

Name : Yashada dure

Date : june 2026

INTRODUCTION

Phishing is a type of cyber attack where attackers attempt to trick individual into revealing sensitive information such as password, credit details or personal data by pretending to be a trustworthy entity.

Attackers uses fake emails, websites, and messages to gain a trust of user and steal their information or deploy malware.

Why Phishing is dangerous?

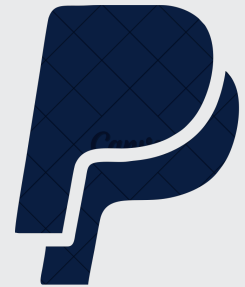

- Leads to identity theft and financial losses
- Compromises personal and organizational data
- Can cause reputational damage
- Used as an entry point in other cyber attacks

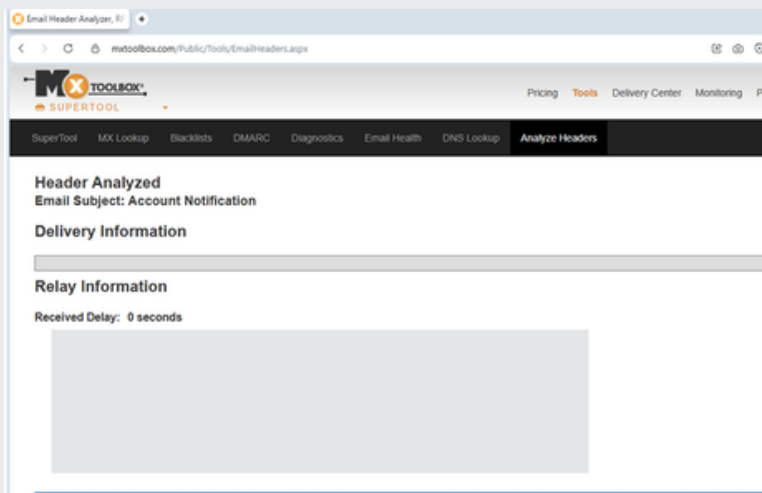

CASE STUDY 1 : PAYPAL PHISHING EMAIL

Email Header

From : support@paypal.com
To : yashada@gmail.com
Subject : Account Notification
Date : Monday 10 June 2026 10.00AM

PAYPAL

Analysis

The sender domain looks similar to the official PayPal domain and tries to gain trust.

A email contains a link asking to verify account information.

The urgency in the email attempts to pressure the user into taking action.

This is a classic example of credential theft attempt.

**RISK
LEVEL
: HIGH**

CASE STUDY 2 : MICROSOFT 365 PHISHING EMAIL

Email Header

From : support@micrOsoft-support.com
To : yashada@gmail.com
Subject : Microsoft 365 Password Expiry Notification
Date : Tuesday 11 June 2026 09.15AM

To: yashada@gmail.com
Subject: Microsoft 365 Password Expiry Notification
Date: Tue, 11 Jun 2026 09:15 AM

Analysis

The sender domain "micrOsoft-support.com" is fake. It uses 'O' instead of 'o' in Microsoft.

The link directs a suspicious website design to steal login credentials.

The email creates urgency by saying password will expire today.

This is a phishing attempt to steal Microsoft 365 account credentials.

**RISK
LEVEL
: HIGH**

Received Header

From: admin@microsoft-support.com
To: yashada@gmail.com
Subject: Microsoft 365 Password Expiry Notification
Date: Tue, 11 Jun 2026 09:15 AM

The email passed SPF, DKIM and DMARC checks, which indicates that the email is from an authorized source.

COMPARISON TABLE

Feature	PayPal Phishing	Microsoft Phishing
Sender Email	support@paypal.com	support@micrOsoft-support.com
Domain Authenticity	Fake / Suspicious	Fake / Suspicious
URL in Email	Suspicious Link	Suspicious Link
Urgency / Threat	YES	YES
Credential Theft Attempt	YES	YES
SPF Result	PASS	FAIL
DKIM Result	PASS	FAIL
DMARC Result	PASS	FAIL
Overall Risk Level	High	High

The email 'support@paypal.com' passed SPF, DKIM, DMARC and email 'support@micrOsoft.com' failed SPF, DKIM, DMARC checks, which indicates that the email is from an authorized source.

RISK ASSESSMENT

Threat/Indicator	Severity	Impact
 Domain Spoofing	High	Attackers use fake domain to impersonate trusted organizations.
 Credential Theft	Critical	Leads to account compromise and financial losses.
 Social Enggineering (Tactics)	High	User are tricked using urgency, fear, or curiosity
 Malicious Link	High	Links may lead to fake login pages or malware
 Data Breach Risk	Critical	Stolen credential can be used for further attacks.

Overall Risk Level :
HIGH

PREVENTION AND RECOMMENDATION

For Users

- Always verify the sender's email address.
- Do not click on links or download attachments for unknown source.
- Check the URL carefully before entering any credential.
- Enable Multi - Factor Authentication (MFA).
- Report phishing emails to your IT team or email provider.

For Organizations

- Implement SPF, DKIM, and DMARC for email security.
- Conduct regular security awareness training.
- Use email filtering and anti-phishing solutions.
- Monitor and analyze email logs regularly.
- Encourage users to report suspicious emails.

AWARENESS POSTER

THINK BEFORE YOU CLICK!

Be Smart. Be Safe. Stay Secure.

Verify the sender email address.

Do not click on suspicious link.

Do not share your password

Report phishing emails.

Cyber Security is Everyone's Responsibility!

The analyzed phishing emails were found to be malicious based on various indicators such as domain spoofing, suspicious links, urgency tactics, and credential theft attempts. Attackers continuously use new techniques to deceive users, but awareness and proper email security measures can significantly reduce the risk.

Stay alert, stay informed, and always think before you click!

KEY TAKEAWAY

- ✓ Phishing attacks are real and can target anyone.
- ✓ Always verify before you trust.
- ✓ Good email security = Strong digital security.
- ✓ Awareness is the first line of defense.
